Livinguard PRO MASK

The Livinguard PRO MASK is classified as a **Medical Mask Type I** and is **certified** according to the European Medical Device Directive under **EN14683:2019**. As required by FFP2 masks, the Livinguard PRO MASK has a close fit to the face and can provide at least **95% filtration** and thus effectively protect against coronavirus transmission.

And there is an additional aspect: Unlike FFP2 masks, common surgical and other standard cloth masks, the Livinguard PRO MASK has been scientifically proven to destroy more than **99.9% of coronavirus (SARS-CoV-2)** as proven by RWTH Aachen and Free University Berlin.

Prof. Dr. Gerhard Hücker, scientific expert in the field of technical hygiene at the German Central Office of the Federal States for the Health Protection of Drugs and Medical Products (Zentralstelle der Länder für den Gesundheitsschutz von Arzneimitteln und Medizinprodukten, ZLG) concludes “The Livinguard PRO MASK has all the qualities of an FFP2 mask and has also been proven to protect against the spread of the coronavirus through cross-contamination. This applies to both known variants and virus mutations too.”

In addition, The Livinguard PRO MASK is **reusable for 210 days** and only needs to be rinsed weekly with cold water, therefore helping to reduce the enormous amount of waste associated with the use of disposable face masks.
